ABR Bioreactor

Stimulates natural organisms that prevent harmful bacteria from developing.

Substrate cultivation has many advantages. The soil is better to control for growers in greenhouse horticulture. Yet it also occurs in this form of horticulture that the crops have to deal with root diseases. Diseases are the most important cause for losses. Often these diseases are also contagious. There are different ways of dealing with this as a grower. In substrate cultivation often opted for complete control of what is in the soil. There is a new strategy that is much more refined and, above all, keeps the soil healthy.

Advantages

- Increases the oxygen level
- Optimizes bacterial life
- Vital and healthy crop
- Improves nutritional intake
- Protection against pathogenic fungi
- Clean water system
