High pressure fog system

The right humidity in your greenhouse.

The high pressure fogging materials of CannaTechnics are of high-quality stainless steel materials, developed specifically for horticulture industry. The stainless steel nozzles are equipped with ceramic plates to ensure that after ten years the same quality droplet size is guaranteed. In the nozzles (extra) filters are mounted that filter to five microns. These filters are mounted to guarantee extra safety, to prevent any dirt from ever getting inside the nozzles.
The system will be designed and calculated based on your needs, suitable to the right humidity input. All components are tailored to each individual project, with specific drawing and with a comprehensive user manual. As a result, our high pressure fogging units are the best available in the market.

Plug and play system

The high pressure pump sets are equipped with plunger pumps in combination with a 1000 RPM electric motor. Because of the low rpm electric motor, the pump has a longer life and produces less noise (decibels). These sets come complete with pressure regulator, safety valve, pressure relief valve, pressure protection, filters, security and control panel which can be provided by a frequency inverter or soft starter.

Benefits of the high pressure spray materials by CannaTechnics

- Full in-house manufacturing.
- High-quality stainless steel materials.
- Anti-drip Nozzles and mounted filters.
- Adjustable from 80 to 120 bar operating pressure.
