HortiMaX-Go!

Affordable and clear control of water and climate, even with little experience.

The HortiMaX-Go! Is especially developed for the horticulturist who takes his first steps in covered cultivation. Thanks to the use of revolutionary hardware, this affordable and easy to install solution stands his ground in the field of both water and climate. The intuitive touch screen operation, the mobile apps and the Cloud service also make the system very user-friendly and accessible.

Tailored exactly to your needs

The HortiMaX-Go! is a fully customized solution: you only select the components, functionality and controls that you need based on your crop, location, level of experience and individual requirements. The HortiMaX-Go! is also far more versatile and scalable than any other similar greenhouse computers on the market today, making it easy to expand as your business grows. So with just a modest investment, you can build a solid foundation that you can eventually expand into a fully integrated solution with a wide range of functionality.

Total control using one integrated system

A unique feature of the HortiMaX-Go! compared to conventional computers in this price range is that it combines climate, irrigation and fertigation control into one integrated system. The major advantage is that you can check your greenhouse environment with one glance at the display. So no more hassle with separate controllers and separate user interfaces.

Easy installation and intelligent control

The HortiMaX-Go! comes with all the required software as standard and configures itself automatically using 'Smart Switches' that feature plug-and-play compatibility. This makes connecting vent motors, screen systems, heating pumps or other greenhouse equipment as easy as connecting a mouse or keyboard to a PC; the system will automatically recognize the device that's been connected. The Smart Switches communicate digitally, enabling the controller and your equipment to exchange data with one another.

Monitor the climate in your greenhouse, from anywhere

The HortiMaX-Go! CloudBox enables you to access the controller via the Internet from anywhere in the world, and at any time. The user interface and the mobile apps feature responsive design, so they will work on any mobile device running iOs, Android or Windows. This means that you can monitor and control your greenhouse, wherever you may be, 24/7.

Advantages

- Plug & Play
- Integrated solution
- Touchscreen interface
- Mobile apps
