Service platform

Secure access to your greenhouse cover.

A service platform with service rail. It should be a standard equipment for every greenhouse. The platform provides safe access to the greenhouse deck for various types of work.

The platform runs over a service rail, which is attached to the facade of your greenhouse at gutter height. The service platform provides safe access to your greenhouse deck for moving deck washers, chalk machines or a Repair Shuttle.

Service rail

safe and solid, for every greenhouse.

A service rail is required to carry the service platform and move it along the façade of your greenhouse. A must for every greenhouse.

A service rail is all about the right load-bearing capacity, so that your safety is guaranteed. We can supply rail systems with maximum load capacity for every greenhouse, so that you can move people and machines safely guaranteed.
